Dear Hiring Manager,

I am excited to apply for the **Engineer I, Software** position at Thermo Fisher Scientific. With a solid foundation in Python programming, hands-on experience with Django, and a passion for building scalable web applications, I am eager to contribute to the Digital Commerce Platforms team in delivering impactful solutions.

During my internships at **Toadfly Technologies, LLC** and **RISS Technologies**, I gained invaluable experience in developing web applications, optimizing performance, and collaborating with cross-functional teams. At Toadfly Technologies, I conducted an in-depth analysis of a legacy codebase, identifying and resolving critical issues that enhanced system performance by 20%. I also optimized database queries, leading to a 15% reduction in application response time, demonstrating my ability to deliver efficient, user-focused solutions.

My work at RISS Technologies further honed my expertise in Python and Django. I developed scalable Django web applications, gaining practical experience in designing RESTful APIs and integrating them with databases like PostgreSQL. Collaborating with team members, I learned to adapt quickly, meet project deadlines, and contribute meaningfully to team objectives.

What excites me most about this opportunity is the chance to work on enterprise-level projects that integrate with diverse systems such as Content Management, Product Information, and ERP platforms. My experience with Python frameworks, API development, and familiarity with cloud platforms like AWS aligns well with the role's requirements. I am confident in my ability to design and maintain high-performance web applications that drive business success.

I am eager to bring my skills, enthusiasm, and commitment to excellence to Thermo Fisher Scientific. I welcome the opportunity to discuss how my experiences and capabilities align with your team's goals.

Thank you for considering my application. I look forward to the possibility of contributing to Thermo Fisher Scientific's mission of enabling a healthier, cleaner, and safer world.

Sincerely,
Augustine Sebastian
